To ensure the technology does what it's supposed to, Adobe said it's working to add privacy controls, which it has said it's also developing for other AI services, including its recently acquired Waze with Cuebiq. The tool will be widely available on devices next fall. Adobe has also tried to improve privacy for photo and illustration pros by adding a feature called Inspector, which acts like a filter that only lets in light and dark shadings that are a part of the original image. The feature's purpose is to help deliver a more natural look for images that might use such techniques. The feature was inspired by an idea from one of the company's own artists, said Mike Matas, vice president of design at Adobe. The idea was to make a tool that could offer more real-world-like results. Adobe says it's offering the Inspector to help users resolve image color problems. A feature was introduced earlier this year that let users choose when to apply the feature, and the company is also working on making the tool more convenient. Thus, Lightroom 5 is a huge evolutionary improvement for all users. Much attention has been paid to the speed and handling of the new Photoshop Designer. However, the application itself has been improved in many other ways including better asset management. It has also been improved for focus entirely to porting to iOS 8 and Apple's new mobile devices (iPhone and iPad). Another new feature, "Photoshop Cloud", allows Lightroom to synchronize edits across multiple devices and automatically back up work to the cloud.

You need to know what type of bevel you are going to add to your image. The next step is to apply the effect.
